Pretest

1. What is a statistic?

2. What is another term for mean?

3. What percentage of a population lies within the first standard deviation of a normal curve?

4. Will one statistic for circulation and one statistic for ILL provide a trend analysis?

5. What does an r coefficient of 0.97 mean?

6. What statistic would help determine a pattern of library use?

7. “Circulations per FTE” statistic is used to describe what?

8. Who is the target population at a children’s program?

9. What does “Per Capita” mean?

10. How do you calculation “Collection Turnover Rate”?

Posttest
